APPLICATION FORM GUIDANCE NOTES FOR APPLICANTS SUBMITTING STAGE 1 APPLICATIONS

(On-line NIHR Stage 1 Standard Application Form (SAF))

Version: July 2018

Contents

1. APPLICATION SUMMARY INFORMATION	3
2. LEAD APPLICANT CV	3
3. LEAD APPLICANT RESEARCH BACKGROUND	4
4. THE RESEARCH TEAM.....	4
5. PLAIN ENGLISH SUMMARY OF RESEARCH	5
6. RESEARCH PLAN	5
7. UPLOADS.....	8
8. ACKNOWLEDGE, REVIEW AND SUBMIT	8

NIHR Research Standard Application Form (SAF)

Stage 1 Application Form & Guidance

1. Application Summary Information

Host Organisation

Please give details of the organisation who will be the contractor if the project is funded.

Research Title (Limit: 300 characters)

The project title should state clearly and concisely the proposed research. Any abbreviations should be spelled out in full.

Research Type

Select the appropriate research type. If your proposed project includes any element of primary research, please select 'Primary Research'. If you are carrying out new analysis of existing data, select 'Secondary Research'. If you are not sure which category to select, choose the closest match to your project as this can be adjusted later.

Proposed Start Date

Note this should be from 1st of the month regardless of whether this is a working day or not. Please be realistic about your possible start date taking account of the necessary contracting, and staff recruitment prior to starting your project.

Research Duration (months)

Ensure you include sufficient time to complete all aspects of the research including applications for regulatory approvals (where required) and the final report.

End Date

This field will automatically populate once you have saved the research duration information.

Estimated Research Costs

Enter the total amount of research costs requested (not including NHS Support & Treatment costs).

Estimated NHS Support & Treatment costs or external (not NHS) intervention costs

Enter the total amount of NHS support and treatment costs or external (not NHS) intervention costs associated with this proposal.

Estimated non-NHS intervention costs

These are similar to excess treatment costs but they mainly apply to Public Health Research. They are unlikely to be applicable to HS&DR unless the intervention is being delivered outside the NHS (e.g. in school or by a local authority etc).

Administrative Contact Details

Do you wish us to contact you, the lead applicant, regarding this application? If no, provide administrative contact details (name, post held, department, organisation, contact details and access rights)

2. Lead Applicant CV

Complete your name, contact details and other requested information.

3. Lead Applicant Research Background

Publication record (Limit: 10000 characters)

Provide details of a MAXIMUM of 6 of your most recent / relevant publications (in the last 10 years) relevant to this application (using Vancouver or Harvard citation format) listed one after another with a blank line between each one. Please use DOI reference numbers if needed.

Research Grants Held (Limit: 10000 characters)

This should include research grants held (as a named applicant) CURRENTLY or IN THE LAST 5 YEARS – as well as any additional previous grants, relevant to this application. Please include who the grant is with and the amount of each grant. If no grants are held please enter N/A (as this is a mandatory field).

Has this application been previously submitted to this or any other funding body?

Select 'Yes' or 'No' from the drop down box to indicate whether this or a similar application has previously been submitted to this or any other funding body. For more information about resubmission of a research/ trainee funding application, or joint funding please contact the appropriate NIHR research funding programme.

Applications Submitted to other NIHR programmes

Where this application or a similar one has been submitted to this or another NIHR programme or elsewhere please click the 'Add' button and complete the necessary information.

We are keen to know if the application has been submitted elsewhere and you must be as open about this as possible. This includes, but is not limited to, any facts that, should they come to light at a future date, would embarrass either the programme or the individual who withheld the fact (e.g. if a member of the team holds a patent or has a financial interest within the research area).

Failure to disclose accurately or fully will be considered by the programme as academic misconduct and treated accordingly. You should also include in this section information on whether this or a similar application has been submitted to any programme previously, or to any other funder including other NIHR programmes. You should name, and provide dates and outcomes of these. Please indicate whether you hold or have ever held an NIHR programme contract which has been terminated prior to completion, extended in time or in terms of funding.

4. The Research Team

Specify your (lead applicant) role in this research (Limit: 200 characters)

Explain in addition to your role as Lead Applicant, the role that you will be undertaking in the research, e.g. co-ordination and project management, analysis, methodological input etc.

%FTE

Commitment: This refers to the percentage of your time that you will commit to this project.

Co-Applicants

Add details of all co-applicants and their specific role in the project. The number of co-applicants is calculated automatically. Do not include collaborators, who should be mentioned (if necessary) in the Research Plan section of the on-line application form.

Co-applicants are those individuals with responsibility for the day to day management and delivery of the project. Co-applicants are considered part of the project team and are expected to share responsibility for its successful delivery. Collaborators normally provide specific expertise on particular aspects of the project but who do not share in the responsibility for the delivery of the project.

5. Plain English Summary of Research

The importance of a plain English summary (Limit: 3500 characters)

A plain English summary is a clear explanation of your research.

Many reviewers use this summary to inform their review of your funding application. They include clinicians and researchers who do not have specialist knowledge of your field as well as members of the public. If your application for funding is successful, the summary will be used on National Institute for Health Research (NIHR) and other websites.

A good quality plain English summary providing an easy to read overview of your whole study will help:

- those carrying out the review (reviewers and board and panel members) to have a better understanding of your research proposal
- inform others about your research such as members of the public, health professionals, policy makers and the media
- the research funders to publicise the research that they fund.

If it is felt that your plain English summary is not clear and of a good quality then you may be required to amend it prior to final funding approval.

It is helpful to involve patients / carers / members of the public in developing a plain English summary.

Content

When writing your summary consider including the following information where appropriate:

- aim(s) of the research
- background to the research
- design and methods used
- patient and public involvement
- dissemination.

The plain English summary is not the same as a scientific abstract - please do not cut and paste this or other sections of your application form to create the plain English summary.

Further guidance on writing in plain English is available online at NIHR Make it clear

www.involve.nihr.ac.uk/makeitclear.

For further support and advice on writing a plain English summary, please contact your local Research Design Service (where applicable). www.rds.nihr.ac.uk.

6. Research Plan

Using all of the headings (in the order presented) and guidance below, please use this section to clearly explain your proposed research. **As this is the main part of your application which will be considered by the reviewing committee you should ensure that the information is accurate, succinct and clearly laid out.** The overall amount of information that you can provide at this stage is limited to 3 - 5 pages (dependent on the type/complexity/scale of study proposed). (Limit: 20000 characters)

The NIHR expects appropriate and relevant involvement of patients and the public and other key stakeholders in the research it supports. It is essential to set out your plans to involve patients and the public in the Stage 1 application. Your patient and public involvement plans will be assessed by the funding panel/board including patient and public members.

Information and resources to assist you can be found on the INVOLVE website ([a detailed definition of patient and public involvement in research](#), [briefing notes for researchers on how to involve patients and the public](#) and an [involvement cost calculator and budgeting guide](#)).

In this section it is important that you identify all stakeholders who are relevant to your research proposal. For each stakeholder group you need to be clear about how they benefit from your proposed

research and, where appropriate, how they have been involved in the development of the application, as well as the plans for their involvement in the proposed research.

1. What is the problem being addressed?

Provide a clear explanation of the health problem to be addressed, the impact on patients as well as health and care services, and how this research would fill a demonstrable evidence gap.

Explain how your proposed research is within the remit of the HS&DR programme, specifying how it addresses the key aim of the programme to produce rigorous and relevant evidence on the quality, access and organisation of health services.

2. Why is this research important in terms of improving the health and/or wellbeing of the public and/or to patients and health and care services?

It is essential that you clearly identify the health and care need your research meets or contributes to. Please outline the anticipated value or contribution the study will provide.

The HS&DR classification of need for research is set out below:

1. Health need: There will be benefits in terms of improving health for the public, patients and/or carers. This covers the potential for preventing avoidable mortality and morbidity, improving quality of life and considerations of disease prevention. For example, research in this area is likely to identify new ways of working that enhance opportunities for health promotion or quality and safety of care. Benefits may also arise from improving the acceptability and effectiveness of care, cost effectiveness to the NHS (health and social care), better targeting of services or equity of access to care.

2. Expressed need: The existence of an expressed need for the research in the health and care management community, and evidence that it is, or will be, highly relevant and important to the needs of the NHS (health and social care). You should consider and demonstrate “What evidence is there that patients and the service want the answer to this question and why will they will want to act on the outcomes of the research?”

3. Sustained interest and intent: Evidence that the issue or area is one in which there will be sustained interest in the future, such that the results of research once commissioned and undertaken will remain highly relevant and important to the needs of the NHS in the future. Researcher-led applications addressing areas of ongoing need, such as NIHR and HS&DR highlight notices and recent NIHR Themed calls should reference this fact in their proposal (under this heading).

4. Capacity to generate new knowledge: The existence of uncertainty or “knowledge gaps” which cannot be addressed by the existing body of research in this area and that require new research.

5. Generalisable findings and prospects for change: Research in this area is likely to produce generalisable or transferable findings of value to the health and care management community, which health and care organisations are likely to be able to use in their decision-making in ways that bring about change and improvement.

6. Building on existing work: Research contributes to building a coherent body of knowledge in the area, and may build on, but not duplicate, previous research.

3. Review of existing evidence - How does the existing literature support this proposal?

Explain why this research is needed now, both in terms of time and relevance. We will only fund primary research where the proposed research is informed by a review of the existing evidence.

1. Commissioned calls: where the request for research to address a specific research question is via a commissioning brief advertised through a commissioned call, a review of the existing evidence will have already been undertaken by the funding NIHR Programme to inform the commissioning brief. Therefore, applicants intending to undertake a systematic evidence review as part of their research should build on and not duplicate the evidence review that will have already been undertaken. Applications in response to commissioned calls will need to address the commissioning brief requirements specific to the NIHR

Programme.

2. Researcher-led calls: for researcher-led or researcher-initiated proposals that include primary research then they should include reference to the existing evidence and explain how this evidence has informed the proposed research. Where an existing systematic review summarises the available evidence this should be referenced, as well as including reference to any relevant literature published subsequent to that systematic review. Where no such systematic review exists, it is expected that the applicants will undertake an appropriate review of the currently available and relevant evidence (using as appropriate a predetermined and described methodology that normally systematically identifies, critically appraises and then synthesises the available evidence) and then present a summary of the findings of this in their proposal. All applicants must also include reference to relevant on-going studies, e.g. from trial registries.

4. What is the research question / aims and objectives?

Please summarise the research question / key aims and objectives.

HS&DR funds research projects, not programmes of work or ongoing work. You must have clearly defined research questions, and aims and objectives, and describe how the planned methodology is likely to achieve these objectives.

5. Project Plan

Provide an expert summary of the project plan of investigation plus any additional points required to support statements made in the previous sections, and include any key references required to justify the points made (e.g. in the use of particular outcome measures or methods of analysis).

1. Design: Please provide a clear summary of the type of study design to be used (e.g. Primary research: controlled trial; Evidence synthesis: systematic review), including methods, proposed sample and analysis methods, and explain why you have chosen the proposed methodology. You should also upload a flow diagram (single-side of A4), as a separate PDF file, for submission with your application form as appropriate. This should illustrate the study design and the flow of participants (if appropriate). If the project consists of more than one work package, consider a diagram that conveys the sequence and timing of research packages as well as how the work packages are linked. For qualitative work it may be appropriate to set out your theoretical framework.

2. Team: Please list and explain the role of key collaborators involved in the research, as well as any patient and public leads (not previously listed as co-applicants).

3. PPI: Describe how patients and the public, as well as other relevant stakeholders, including evidence users, have been involved in the development of the application as well as plans for involvement in the proposed research. Your Initial application will be assessed by a PPI panel member who will consider this aspect of your proposal.

4. Describe your plans for disseminating the outputs / findings of this research: Our key concern is to ensure that projects funded by the HS&DR programme are designed from the outset to produce useful, timely and relevant research findings, which are then used and actually make a difference. Please describe the main knowledge products or outputs from your research and how they will be presented, disseminated and used. Explain how the findings from the proposed research will be shared with, or disseminated to others and how this will maximise the potential impact of the proposed research. Describe who are the likely beneficiaries of the research, when are they likely to benefit and in what ways, and describe how the knowledge will be translated into the real world.

5. Expected Impact: Use this section to provide information about the impact you anticipate the study may have. We acknowledge that defining impact can be challenging and paths to impact are complex with many steps beyond your control. We therefore define impact broadly as the contribution, effect on, or benefit that excellent research makes to knowledge, people, health and care, the NHS, health and care services, society or the economy. We wish to understand the ways in which the proposed research will change activity, attitudes, awareness, behaviour, capacity, opportunity, performance, decision-making, practice or processes. Impact can also result from new understanding that benefits individuals,

population, organisations, communities, constituencies or the nation.

6. We expect that all researchers who have a contract with the NIHR to undertake research shall ensure that the outcome of the research is prepared as a research paper for publication in a suitable peer-reviewed journal. We would also encourage all researchers to disseminate their research findings to the broader public as well as to the research participants / health and care management community (as appropriate) when the study has completed.

Further information / tips can be found at: [Tips for applicants](#)

7. Uploads

ATTACHMENT 1: FLOW DIAGRAM

Finally, please create a flow diagram (single-side of A4), as a separate PDF file, for submission with your application form. This should illustrate the study design and the flow of participants. Applicants should also describe complex interventions and controls as accurately and fully as possible within their diagram. If proposing an RCT, we advise you refer to the CONSORT statement and website for guidance, (<http://www.consort-statement.org>). Alternatively, you may find the EQUATOR Network website useful (www.equator-network.org). The PDF file should be submitted along with your application form.

ATTACHMENT 2: REFERENCES

One single-side A4 page, listing references used throughout your proposal is also a mandatory PDF upload. Please use either the Vancouver or Harvard referencing conventions.

8. Acknowledge, review and submit

Conflict checks

Please declare any conflicts or potential conflicts of interest that you or your co-applicants may have in undertaking this research, including any relevant, non-personal & commercial interest that could be perceived as a conflict of interest.

Agreement to terms and conditions

I have read and understood the terms on which I have been nominated as Chief Investigator for this proposal along with the associated documentation and accept this role.

A list of terms and conditions can be found here: [Terms and Conditions](#)

Checklist of information to include when submitting a NIHR stage 1 research application

Applicants should click the check boxes to indicate that they have included the necessary information prior to submitting their application.

- A good quality Plain English Summary www.involve.nihr.ac.uk/makeitclear
- A clear explanation of the problem being addressed
- A clear demonstration of the need and importance of the research
- A review of existing literature (primary research)
- A clear research question / aim(s) and objectives
- A clear project plan summarising the study design and methods
- A clear description of team member roles and contribution
- Appropriate and relevant involvement of patients and the public www.involve.nihr.ac.uk
- A clear, appropriate and relevant plan for dissemination
- A flow diagram illustrating the study design / flow of participants (document upload)

- One single-side A4 page of references, using either the Vancouver or Harvard referencing conventions (document upload)
